APP

SYSTEM BENEFITS

SureWash is a cost-effective hand hygiene training system teaching the WHO technique.

200+

hospitals groups and universities use the SureWash platform

650,000+

Registered users on SureWash to date

1,000,000+

hand hygiene training sessions are delivered by SureWash annually

SUREWASH APP

The SureWash APP is a mobile learning system that combines e-learning, gamification and patented gesture recognition technology to provide training in hand hygiene technique.

It uses the phone camera to measure hand motions and provide real-time feedback to support the user in a “Deliberate Practice” learning framework. This approach helps users to develop muscle memory, therefore improving compliance, reducing the risk of infections and improving patient outcomes.

Not only is this training system beneficial to hospital staff, SureWash APP also generates awareness around infection control amongst patients and family members. Its ease of use results in patients and visitors finding the training an engaging and positive experience.

As a result of cameras on mobile phones varying in quality, the standard of the SureWash APP will differ depending on your model/brand. Research identifies that it works best on Apple products but is available on Android also. Therefore, we recommend that the SureWash APP is best suited for practicing your hand hygiene technique to verify your training on the SureWash GO or ELITE.

The SureWash APP is not currently optimised for tablet devices.

Ultimately, SureWash not only saves organisations time, money and productivity, but has a very real impact in improving patient outcomes.
