250+

hospitals groups and universities use the SureWash platform

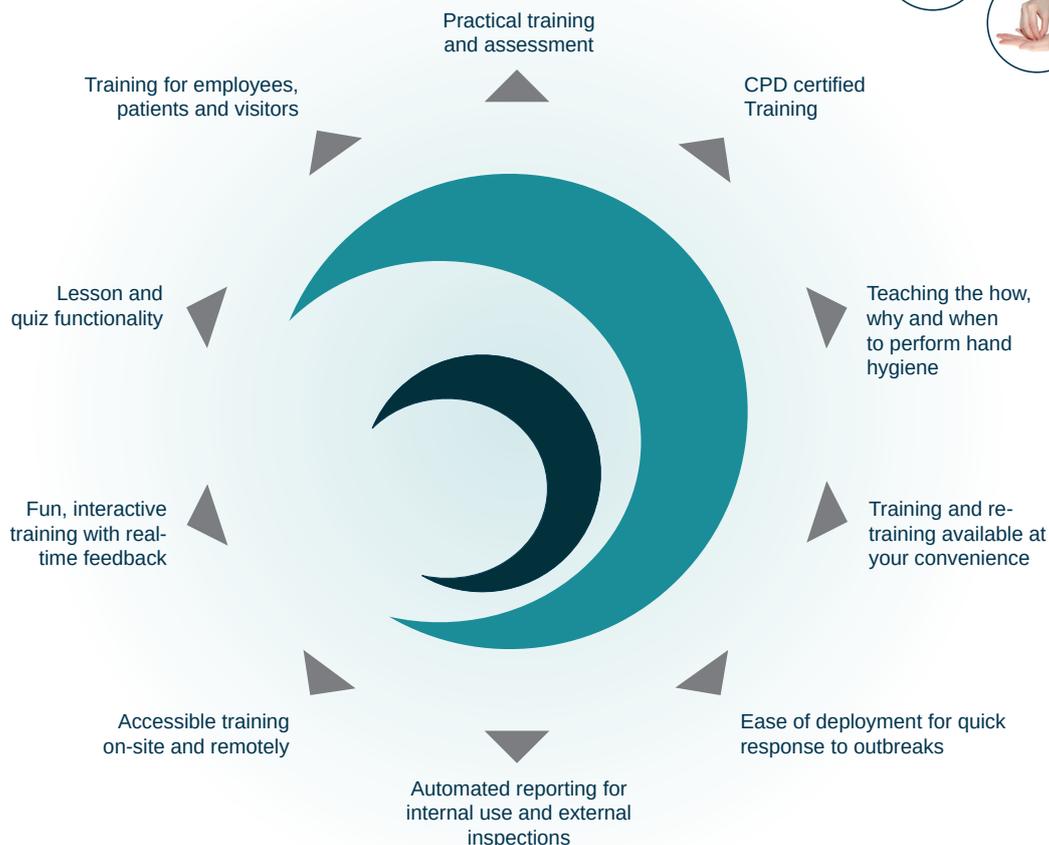

2,000,000+

hand hygiene training sessions are delivered by SureWash annually

650,000+

registered users on SureWash to date

WHAT WE DO

SureWash's validated technology delivers assessment-based training and education on the how, why and when to perform hand hygiene.

SureWash standardises hand hygiene training by delivering objective, realtime feedback to users on their hand hygiene technique. Customisable IPC education is also available through lesson and quiz format to support the practical training. SureWash training is available in the workplace environment to encourage self-directed learning. All data is uploaded to the SureWash cloud-based reporting suite for management to view and assess.

WHY WE DO IT

SureWash helps facilities reduce infections, manage risk and achieve external certification for infection control. Our unique technology helps improve hand hygiene culture by empowering staff and providing interactive and accessible education. SureWash also acts as an actionable reminder of hand hygiene education in a facility, and engagement reports help hold staff accountable for their training.

We want to help healthcare workers build the skill of hand hygiene to keep both themselves and their patients' safe. A study with Yale University found that it takes 32 hand hygiene exercises or a total of 23 minutes training to achieve proficiency. Therefore, we encourage a "practice, rest, repeat" technique to improve learning outcomes compared to intense learning in the classroom setting.

Percentage compliance with WHO '5 moments'

Improving long term results on hand hygiene interventions

SUREWASH E-LEARNING

The SureWash APP is a mobile learning system that can integrate with your existing Learning Management System (LMS) or Virtual Learning Environment (VLE).

The SureWash APP enables facilities to deliver both on-site and remote hand hygiene training. The app can be used on its own and linked with the SureWash reporting suite, or it can link to your existing LMS or VLE. When integrated with your e-learning platform, you can deliver both practical training and theoretical content on hand hygiene and IPC topics. The practical assignment will take place on the SureWash Hand Hygiene APP. Through the app, users will learn the World Health Organization (WHO) 6-step hand hygiene technique. To support this learning, instructors will also be provided with customisable templates for lessons and quizzes.

The SureWash APP can be downloaded onto both Apple and Android devices. The front camera on a device measures the users hand motions and the screen then provides real-time feedback. There are 5 levels on the app, each with a different challenge. Once your students/employees can pass level 5, they are proficient in hand hygiene and can receive 1 CPD point.

As the app can be connected to your LMS, training data is available for instructors to view on their existing e-learning platform.
